Portfolio Building- B25CS0311

Activity	Deliverables
Activity 0: Development Environment Setup (Editor & Version Control)	Screenshots of: git --version output; code --version output; the cloned Hello-World repo open in VS Code (Explorer and Source Control panels visible)
Activity 1: Setting Up a C/C++ Development Environment in VS Code	Working C/C++ environment (VS Code + C/C++ extension + MinGW-w64) verified with gcc --version; hello.c plus a screenshot of successful compile and "Hello, World!" output; a 5–8-line setup note on problems faced and how they were resolved, committed to GitHub in Activity-1-Dev-Environment-Setup
Activity 2: VS Code Extension Tour	Screenshots of: Python Hello World, Java Hello World, a Prettier before/after, GitLens blame annotations, and an active Live Share session showing the partner's cursor; one-paragraph written comparison of the extensions
Activity 3: GitHub Fundamentals I (Repositories & Commits)	Public repository URL named after roll number or handle; README.md with a one-paragraph introduction; commit history showing 3 or more separate, descriptively named commits; confirmation that the repo is Public
Activity 4: GitHub Fundamentals II (Branches, Pull Requests & Pages)	Link to the merged Pull Request; live GitHub Pages URL showing the Projects section; repo history showing add-projects-section merged into main; local main confirmed up to date via git log --oneline
Activity 5: Collaborative Coding with GitLens and Live Share	greet() commit pushed to GitHub, crediting the partner and verified in GitLens; README "Collaboration Log" (partner's name and GitHub username, what was built, one thing learned) committed and pushed as a separate second commit
Activity 6: LeetCode Practice & Portfolio Integration	leetcode-solutions repo on GitHub; 8 solved problems across the 4 topic folders, with local test cases; 8 per-problem .md documentation files (approach, complexity, notes); "Accepted" screenshot for each problem; updated PROGRESS.md; root README.md with table of contents

Activity	Deliverables
Activity 7: Build a Simple Line Editor in C (Coding Competition)	Paper design (data structure choice and hand-written core logic); working C project in a GitHub repo that compiles with gcc; help file (HELP.md or help.txt) with a usage example per command; README (team members, features implemented, compile/run instructions)
Activity 8: HackerRank Problem-Solving & Portfolio Integration	5 mandatory HackerRank problems solved; public repo HackerRank-3rdSem-Portfolio with a commented-code subfolder per problem; root README (HackerRank profile link, screenshots of Accepted submissions and badges, time/space complexity table); 2-page PDF report (repo link, profile URL, ~200-word reflection); at least a 3-Star HackerRank badge
Activity 9: LinkedIn Profile & Networking (profile building)	Public profile URL confirmed visible in an incognito window; headline with a target role and keyword (not the default "Student at REVA"); 3–4 sentence About section; complete Education entry and at least 2 skills; profile photo with a plain background; Open to Work enabled with recruiter-only visibility (if seeking internships)
Activity 10: LinkedIn Networking & Content	Screenshot of the published reflective post; screenshot of at least one personalized connection request (accepted or pending) with the note visible; 3 companies and 2 professionals followed; one meaningful comment posted
Activity 11: Instagram Branding & Coding Platforms	Screenshot of the published Story or post made from a Canva template; screenshot of the "Dev Journey" highlights with at least 1 saved item; 3 tech creators or developer-community accounts followed; account or highlight visible to the evaluator (Public, or evaluator added as a follower)
Activity 12: Building Your Portfolio Blog by Prompting an AI Assistant	(1) 1–2 page portfolio brief; (2) prompt log with the initial prompt, every follow-up prompt, and a one-line note on what changed each time; (3) live page at https://<username>.github.io, published via the GitHub web interface and linking to the hello-world and leetcode-solutions repos
Activity 13: Global Tech Ambassador &	2-page PDF or Markdown portfolio entry containing: a comparative matrix of two chosen programs (eligibility, deadlines, perks); a gap analysis with a 4-week preparation

Activity	**Deliverables**
Open-Source Pathway Selection	timeline; drafted application material (e.g. a 250-word community motivation essay)
Activity 14: Hackathon Preparation	Team roster with each member's name and role; link to the chosen hackathon page (Devfolio/Unstop); one-paragraph problem statement with the tech stack listed; document or GitHub Issue shared with all team members
